Custom Symitar Programming

Synergent supports credit unions with complex technology management through the delivery of quality, timely programming services.

Is your staff maxed out? Does your credit union have a backlog of projects that need clearing? Do you need more help writing and integrating code for the latest third-party product? Would you like to develop core data reports that can guide your credit union decision making? If you answered "yes" to any of these questions, connect with Synergent for your programming solutions!

Complex Technology Management

Save time by allowing our experts in residence to become an extension of your staff while reducing your IT costs. Key areas for IT concern include:

- Maximizing value from technology relationships
- Too many projects, too few resources
- Controlling technology costs
- Successfully launching new products

Requisite integration of the products you use each day to meet the needs of your members has grown more complex. Based on this feedback, Synergent has established service offerings to meet the demands created by advancing technology.

Synergent has been part of this time of growth as a credit union-owned service organization that has served only credit unions since 1971. Across our product lines—Payments, Technology, and Marketing—we maintain over 200 credit union service relationships. We offer

Custom Symitar Programming

PowerOn programming, as well as programming designed to integrate Jack Henry™ Symitar® with third-party applications.

Our PowerOn Expertise

PowerOn is a versatile programming language used to extend the functionality of Symitar. Synergent uses this powerful tool to support your credit union needs of creating defined queries, intuitive inquiry screens, and validation screens.

With Synergent's programming support, custom PowerOn code modules maximize the functionality and flexibility of Symitar, expedites responses to member and market demands, and reduces operating costs. Most PowerOn code customizations that we program fall into one of six areas:

- Reporting
- Data Integration
- Data Entry and Transaction Validation
- File Maintenance
- Peripheral Integration
- Email Generation

"Synergent has been a provider of Symitar since 2004 and our staff has extensive experience on the system. What we really excel at is taking what a credit union might want as an end result and we work with them hand-in-hand to develop a working solution that meets their needs."
